Gabriel **Cañedo Riedel**

Ph.D. Candidate in Economics · University of California San Diego

9500 Gilman Dr., La Jolla, CA 92093

(858) 539-5507 | gabrielcr@ucsd.edu | gabriel.cr

Placement Director:	Prashant Bharadwaj	prbharadwaj@ucsd.edu	
Placement Coordinator:	Andrew Flores	econ-jobmarket@ucsd.edu	(858) 534-1867

Education

University of California San Diego (UCSD) — *San Diego, CA*
Ph.D. in Economics — *2021–2027 (expected)*
Dissertation committee: Joel Watson, Nir Jaimovich, Fabian Trottner, and Fabian Eckert.

Instituto Tecnológico Autónomo de México (ITAM) — *Mexico City, MX*
M.A. in Economic Theory — *2019–2021*
summa cum laude

ITAM — *Mexico City, MX*
B.A. in Economics — *2013–2018*
summa cum laude

Fields

Primary	Applied Micro (Theory and Empirics)
Secondary	Applied General Equilibrium
Organizing Topic	Industry and Regulation
Teaching	Microeconomics, Data Analysis, Undergraduate Macroeconomics

Working Papers

"Regulatory Capture via Relative Prices" **(Job Market Paper)**

I study regulations whose proportional effect on marginal costs decreases with productivity. Every price rises, but the least burdened firms raise their prices least. They become relatively cheaper, attract demand, and gain revenue, profit, and market share. Using Nielsen scanner data, I find evidence of this mechanism under the Food Safety Modernization Act: larger firms grow in affected categories but not in paired placebos. In oil-roasted nuts, two firms with a 10:1 revenue ratio before the act ended the post period with a 30:1 ratio. The largest firms in the affected categories lobbied for the act. The general-equilibrium estimates imply category price-index increases of up to ten percent, with only the most productive sixth to third of firms gaining. A benchmark model that treats goods as homogeneous would reverse the welfare conclusion in four categories, reporting gains where the differentiated model yields losses.

"Who Wins With Up-Zoning? Quasi-Experimental Evidence from California's Reforms for Accessory Dwelling Units" (with Philip Hoxie)

Can up-zoning and permitting reforms for small units increase housing supply, and who captures the benefits? We study California's 2017 deregulation of accessory dwelling units (ADUs) through state preemption of local permitting, exploiting a regulatory discontinuity at the California Coastal Zone boundary. Permitting reforms increased ADU permitting activity by about 30%, although these effects are small in magnitude. However, the reform did increase land values by 7%. With a simple model, we show that the change in land values reflects the decreased permitting costs associated with the reform package. We also find that permitting reforms are likely not creating large price spillovers, and the increases in land values are associated with a 1.3% increase in property tax collections.

"Price and Market Segmentation Consequences of Targeted Vouchers" (with Emiliano Ramírez and Cristián Sánchez)

We study how Chile's targeted voucher reform reshaped tuition-setting incentives and market segmentation. Participating schools received additional funding for disadvantaged students while being prohibited from charging them

top-up fees. Using variation in pre-reform eligibility across municipalities, we find that fees faced by non-eligible students also fell on average in more exposed markets, while private voucher schools that opted out raised fees, moving upmarket. We interpret these patterns through models of school competition with peer effects and sorting. Estimates from a pre-reform school choice model indicate an economically meaningful willingness to pay to avoid low-income peers.

"Supply-side Responses to Targeted Vouchers" (with Cristián Sánchez)

We examine schools' responses to a 2008 targeted voucher reform in Chile. Private schools' responses to the reform are quicker and larger than public schools' responses; however, schools in both sectors react to the policy along various margins. Private schools enter and exit the market more often. Public and private schools improve educational inputs related to school infrastructure and the teaching staff. Interestingly, private schools' fee responses are such that low income students see an increase in the average fee they face in the market, and higher income students see a decrease in the average fee they face.

"Across CES"

I show that CES share functions have an exact representation as log-logistic distribution functions in own price, and that any demand system nesting CES inherits a generalization of this structure. Because share functions fully characterize a demand system, this makes the tools of distribution theory available for demand system design, providing a constructive approach to building flexible alternatives that nest CES. The representation also has economic content: expenditure shares can be interpreted through distributions of consumers' reservation prices, connecting aggregate demand to binary purchasing decisions.

Presentations

Center for U.S.–Mexican Studies (USMEX), UCSD — Summer Seminar (invited talk)	2026
California Institute of Technology, Theory Seminar	2025
LACEA-LAMES Conference, Morelia, MX	2019
UCSD — Micro Theory, Macroeconomics, and Applied Micro Workshops	2022–2026

Grants & Fellowships

Regents Fellowship, UCSD	2024
Summer Research Fellowship, UCSD	2023
Summer Research Fellowship, UCSD	2022
Regents Fellowship, UCSD	2021

Research Experience

Prof. Sally Sadoff, Rady School of Management, UCSD — *San Diego, CA*

Graduate Student Researcher — *June–October 2024*

Linked Paycheck Protection Program loan records to company officer records nationwide for a study of discrimination in U.S. small business lending.

Center for Economic Research (CIE), ITAM — *Mexico City, MX*

Research Assistant — *2018–2021*

Conducted causal analysis of Chile's targeted voucher reform and coauthored the resulting papers.

Teaching Experience

UCSD — *San Diego, CA*
Instructor of Record — ECON 5: Introduction to Data Analysis — *Summer 2025*

UCSD — *San Diego, CA*
Teaching Assistant — *2021–present*
ECON 1: Principles of Microeconomics; ECON 100A–C: Microeconomics; ECON 109: Game Theory; MGT 100: Customer Analytics; MGT 414: Rady Action Project (MBA capstone).

Teaching and Learning Commons, UCSD — *San Diego, CA*
Certificate — Specialist in Student-Centered College Teaching — *August 2025*

Professional Experience

R2 — Riedel Inteligencia y Estudios de Mercado — *Guadalajara, MX*
Economic Consultant — *2020–2024*
Built MaMi, a machine-learning model that ranks retail locations across a metropolitan area from census, deprivation, street-network, and business-registry data. gabriel.cr/consulting

SELZ Group — *Mexico City, MX*
Coordinator, Economics Department — *2017*
Led a team of five economists assessing the economic viability of Mexico's proposed special economic zones.

Computational Skills

Languages	**Python, R, Stata, MATLAB, SQL, LaTeX**
Specialties	**Geospatial analysis (QGIS, GeoPandas), structural estimation, data pipelines**

Community Service

CCG — *Guadalajara, MX*
Co-Founder & Director — *2011–2013*
Co-founded and led a legal-aid organization providing civil and commercial legal services to individuals living in poverty.

Additional Information

Nationality	Mexican
Languages	Spanish (native), English (fluent)

PhD Committee

Joel Watson	Professor of Economics, UCSD	jwatson@ucsd.edu
Nir Jaimovich	Professor of Economics, UCSD	nijaimovich@ucsd.edu
Fabian Trottner	Assistant Professor of Economics, UCSD	ftrottner@ucsd.edu
Fabian Eckert	Assistant Professor of Economics, UCSD	fpe@ucsd.edu
