

GABRIEL CAÑEDO RIEDEL

gabrielcr@ucsd.edu
www.gabriel.cr
San Diego, California

My mathematical mind and my understanding of human nature, grounded in biology as much as in philosophy, allow me to capture complex social and economic problems, distill them into their constituent parts, and render them as models. Those models reveal interactions and relationships that are not evident to the naked eye, and they inspire solutions that are simple, effective, and workable.

EDUCATION

Ph.D. in Economics , University of California, San Diego	2021–2027 (expected)
Advanced to candidacy in 2024. Regents Fellowship (2021, 2024); Summer Research Fellowships (2022, 2023).	
M.A. in Economic Theory , ITAM, Mexico City — Summa Cum Laude	2021
B.A. in Economics , ITAM, Mexico City — Summa Cum Laude	2018

EXPERIENCE

Economic Consultant — R2 — Riedel Inteligencia y Estudios de Mercado	Guadalajara, Jalisco	2020–2024
- Built MaMi, a machine-learning system that divides the Guadalajara metropolitan area into 165-meter cells and scores each one for its viability as a site for a new business. It learns the habitat in which a business thrives, drawing on more than 400 variables from public sources —INEGI’s census and economic censuses, CONAPO’s marginality index, a decade of the DENU business registry, and the street and transit network— and predicts whether a business placed there will prosper. Sample: www.gabriel.cr/consulting. - Presented the findings directly to owners and boards, translating the model’s output into expansion decisions: where to open, why, and which variables carried the most weight.		
Coordinator, Economics Department — SELZ Group (logistics)	Mexico City	2017
- Led a team of five economists assessing macroeconomic conditions and the viability of Mexico’s proposed special economic zones, in order to guide the firm’s investment decisions. - Wrote the team’s report on Free Economic Zones, which reached the Secretary of Economy. Written before the 2017 zones existed, the report correctly anticipated the United States’ <i>nearshoring</i> of production to Mexico.		
Co-founder and Director — CCG, legal aid organization	Guadalajara, Jalisco	2011–2013
Founded a <i>pro bono</i> legal aid organization while studying law and directed it through more than fifty civil and commercial cases for people living in poverty in Guadalajara. The organization continued operating after I handed it to a successor.		
Research Assistant — Center for Economic Research (CIE), ITAM	Mexico City	2018–2021
Measured the effects of a national education reform on tuition, on investment in teaching inputs, on staffing, and on student performance. Retained as coauthor on the resulting academic papers.		

RESEARCH

Regulatory Capture via Relative Prices — Doctoral thesis

Regulations can concentrate profits among a small group of firms. When complying with a regulation costs small firms more effort than it costs large ones, the regulation shifts customers and revenue toward the large firms. I show when and why it suits large firms to support laws that raise everyone's costs, and I test the impact of the phenomenon on United States food-safety regulation.

Price and Market Segmentation Consequences of Targeted Vouchers — with Cristián Sánchez and Emiliano Ramírez
Chile increased the subsidy for low-income students, on the condition that schools accepting it charge those students nothing. The school system split in two: schools that took the money lowered their fees for everyone, and schools that turned it down raised theirs and moved upmarket. The size of that gap shows how much families will pay to keep their children away from poorer classmates.

Inputs and the School Quality Effects of Targeted Vouchers — with Cristián Sánchez

The same reform increased schools' investment in teaching materials and staff, which translated into modest improvements on standardized tests, above all in lower-income schools.

Living with Density: California's By-Right Permitting for Accessory Dwelling Units — with Philip Hoxie

California made it easier to build secondary dwellings. Building permits doubled and, as a result, land values rose by between 5 and 10 percent.

TALKS

- “Regulatory Capture in International Treaties,” USPI Summer Seminar, Center for U.S.–Mexican Studies, University of California, San Diego (2026) — programme shared with Mexico's Undersecretary for North America, the Ambassador of Canada to Mexico, and Mexico's former Undersecretary for Foreign Trade, a USMCA negotiator.
- Theory Seminar, California Institute of Technology (2025).
- LACEA–LAMES Conference, Morelia, Michoacán (2019).

SKILLS

- **Data and modeling:** *machine learning* and predictive models, causal evaluation of public policy, geospatial analysis, survey microdata, and administrative records. Extensive experience with INEGI, CONAPO, and DENUÉ sources.
- **Tools:** Python, R, Stata, SQL, MATLAB, QGIS/GeoPandas, Git, $\LaTeX$.
- **Languages:** Spanish and English.
