Teaching Statement

Gabriel Cañedo Riedel

The most important way economics has impacted my life is through its wealth of concepts. The economist's way of thinking has allowed me to better understand the world and has helped me navigate it. Especially dear to me are concepts like decreasing marginal returns, cursed equilibrium and the winner's curse.

My objective when teaching is to gift the next generation with the powerful concepts economics has to offer. Most of these concepts are not immediately apparent, and require real work on the part of the student if they are to integrate them into their lives. The way I can help them on this path is to give them an account of the concepts that is as simple and intuitive as possible, so they are better equipped to grapple with them.

In practice, I work through problems live at the board and give several examples. After the examples have settled in, I then generalize the concepts. I ask questions throughout rather than checking at the end, because a student who can state an idea back to me has understood it and one who cannot has not, and I would rather find that out in section than on the exam.

I have taught across the undergraduate microeconomics sequence at UC San Diego, from Principles of Microeconomics through Microeconomics A, B and C, as well as Game Theory and two courses at the Rady School of Management. In Summer 2025 I was the instructor of record for Introduction to Data Analysis, where I taught the full course. In 2025 I also completed the Specialist in Student-Centered College Teaching certificate at UC San Diego's Teaching and Learning Commons.

Selected comments from my teaching evaluations

> "He should be the professor of the course. I learned more in one midterm review than I had in 3 weeks of lectures. He is very concise at teaching and helps you understand these concepts in a simple manner without as much fluff as the actual lectures. He made 2 hours of review fly by like it was 20 minutes of teaching. He made me very much more interested in economics and whether to continue studying it." — Fall 2023, Econ 1

> "His story telling capabilities and the way he explains his solutions for problems helped me understand the material better. He also asks questions to make sure that students actually understand the material." — Spring 2026, Econ 100A

> "Gabriel was clear and offered a linear explanation that allowed us to see the course material from a different perspective." — Spring 2025, Econ 100B

> "Gabriel is good at dissolving the material to something far easier to digest." — Fall 2024, Econ 1

> "Personally, Gabriel made me enjoy the topic of microeconomics simply because of his great amount of passion and enthusiasm towards teaching the course content. He always seemed joyful and engaged with us." — Fall 2025, Econ 1

> "Gabriel was my favorite TA out of all of my courses. I really appreciate the time, energy, and effort he put towards teaching us in section and discussion hours. Thank you for everything you've done for us!" — Fall 2025, Econ 1

"He spent an hour helping me outside of his office hours trying to fix my corrupted data and he fixed it although it was so difficult. He also was very good at explaining theoretical concepts and the logic behind the code. This was the best, most dedicated, and supportive TA I ever had."

— Spring 2024, Customer Analytics

"JUST AMAZING. I WISH HE WAS A PROFESSOR." — Fall 2024, Econ 1
