

Gabriel Cañedo Riedel

PH.D. CANDIDATE IN ECONOMICS · UNIVERSITY OF CALIFORNIA SAN DIEGO

9500 Gilman Dr., La Jolla, CA 92093

☎ (858) 539-5507 | ✉ gabrielcr@ucsd.edu | 🏠 gabriel.cr

Placement Director: Prashant Bharadwaj prbharadwaj@ucsd.edu

Placement Coordinator: Andrew Flores econ-jobmarket@ucsd.edu (858) 534-1867

Education

University of California San Diego (UCSD)

PH.D. IN ECONOMICS

San Diego, CA

2021–2027 (expected)

Dissertation committee: Joel Watson, Nir Jaimovich, Fabian Trottner, and Fabian Eckert.

Instituto Tecnológico Autónomo de México (ITAM)

M.A. IN ECONOMIC THEORY

Mexico City, MX

2019–2021

summa cum laude

ITAM

B.A. IN ECONOMICS

Mexico City, MX

2013–2018

summa cum laude

Fields

Primary
Secondary
Teaching

Macroeconomics, Applied Theory
Applied Microeconomics
Microeconomics, Data Analysis

Working Papers

“Regulatory Capture via Relative Prices” (Job Market Paper)

Large firms lobby for regulations that raise production costs, including their own. I show when and why this pays. I study regulations with regressive incidence: their incidence on marginal costs decreases with productivity. Every price rises, but the least burdened firms raise their prices least. They become relatively cheaper, attract demand, and gain revenue, profit, and market share. Using Nielsen scanner data, I find evidence of this mechanism under the Food Safety Modernization Act: larger firms grow in affected product categories, with no corresponding pattern in paired placebo categories. The largest firms in the affected categories lobbied for the act. The general-equilibrium estimates imply category price indices up to ten percent higher, with only the top fifth to third of firms gaining.

“Who Wins With Up-Zoning? Quasi-Experimental Evidence from California’s By-Right Permitting Reforms for Accessory Dwelling Units” (with Philip Hoxie)

We study California’s 2017 reforms to accessory dwelling unit (ADU) permitting, exploiting a regulatory discontinuity at the Coastal Zone boundary. The reforms increased permitting activity by about 30%, although take-up remained low. Land values rose by 7%. A stylized model shows how lower permitting costs can be capitalized into land values through the option to build an ADU, benefiting incumbent owners even when they do not build. We also find a 3% increase in property tax collections and no detectable price spillovers across the boundary.

“Inputs and the School Quality Effects of Targeted Vouchers” (with Cristián Sánchez)

We study schools’ responses to Chile’s targeted voucher reform, exploiting differences in its intensity across local education markets. Both public and private voucher schools reduced class sizes and adjusted staffing and teachers’ working conditions. We find gains in school value added among private voucher schools, although schools induced to participate were not the main drivers of these gains. We then examine how observed educational inputs relate to the reform’s effects on school value added.

“Price and Market Segmentation Consequences of Targeted Vouchers” (with Emiliano Ramírez and Cristián Sánchez)
 We study how Chile’s targeted voucher reform reshaped tuition-setting incentives and market segmentation. Participating schools received additional funding for disadvantaged students while being prohibited from charging them top-up fees. Using variation in pre-reform eligibility across municipalities, we find that fees faced by non-eligible students also fell on average in more exposed markets, while private voucher schools that opted out raised fees, moving upmarket. We interpret these patterns through models of school competition with peer effects and sorting. Estimates from a pre-reform school choice model indicate an economically meaningful willingness to pay to avoid low-income peers.

“Across CES”

I show that CES share functions have an exact representation as log-logistic distribution functions in own price, and that any demand system nesting CES inherits a generalization of this structure. Because share functions fully characterize a demand system, this makes the tools of distribution theory available for demand system design, providing a constructive approach to building flexible alternatives that nest CES. The representation also has economic content: expenditure shares can be interpreted through distributions of consumers’ reservation prices, connecting aggregate demand to binary purchasing decisions.

Presentations

Center for U.S.–Mexican Studies (USMEX), UCSD — Summer Seminar (invited talk)	2026
California Institute of Technology, Theory Seminar	2025
LACEA-LAMES Conference, Morelia, MX	2019
UCSD — Micro Theory, Macroeconomics, and Applied Micro Workshops	2022–2026

Grants & Fellowships

Regents Fellowship, UCSD	2024
Summer Research Fellowship, UCSD	2023
Summer Research Fellowship, UCSD	2022
Regents Fellowship, UCSD	2021

Research Experience

Prof. Sally Sadoff, Rady School of Management, UCSD

San Diego, CA

GRADUATE STUDENT RESEARCHER

June–October 2024

Linked Paycheck Protection Program loan records to company officer records nationwide for a study of discrimination in U.S. small business lending.

Center for Economic Research (CIE), ITAM

Mexico City, MX

RESEARCH ASSISTANT

2018–2021

Conducted causal analysis of Chile’s targeted voucher reform and coauthored the resulting papers.

Teaching Experience

Teaching and Learning Commons, UCSD

San Diego, CA

SPECIALIST IN STUDENT-CENTERED COLLEGE TEACHING (CERTIFICATE)

August 2025

UCSD

INSTRUCTOR OF RECORD — ECON 5: INTRODUCTION TO DATA ANALYSIS

San Diego, CA
Summer 2025

UCSD

TEACHING ASSISTANT

ECON 1: Principles of Microeconomics; ECON 100A–C: Microeconomics; ECON 109: Game Theory; MGT 100: Customer Analytics; MGT 414: Rady Action Project (MBA capstone).

San Diego, CA
2021–present

Professional Experience

R2 — Riedel Inteligencia y Estudios de Mercado

ECONOMIC CONSULTANT

Built MaMi, a geospatial scoring model that ranks retail locations across a metropolitan area from census, socioeconomic deprivation, street-network, and business-registry data.

Guadalajara, MX
2020–2024

SELZ Group

COORDINATOR, ECONOMICS DEPARTMENT

Led a team of five economists assessing the economic viability of Mexico's proposed special economic zones.

Mexico City, MX
2017

Computational Skills

Languages **Python, R, Stata, MATLAB, SQL, $\text{\LaTeX}$**
Specialties **Geospatial analysis (QGIS, GeoPandas), structural estimation, data pipelines**

Community Service

CCG

CO-FOUNDER & DIRECTOR

Co-founded and led a legal-aid organization providing civil and commercial legal services to individuals living in poverty.

Guadalajara, MX
2011–2013

Additional Information

Nationality Mexican
Languages Spanish (native), English (fluent)

PhD Committee

Joel Watson	Professor of Economics, UCSD	jwatson@ucsd.edu
Nir Jaimovich	Professor of Economics, UCSD	nijaimovich@ucsd.edu
Fabian Trottner	Associate Professor of Economics, UCSD	ftrottner@ucsd.edu
Fabian Eckert	Associate Professor of Economics, UCSD	fpe@ucsd.edu
